

```
1 from django.shortcuts import render
```

```
2  
3 # Create your views here.  
4
```

Desktop folder created on terminal using mkdir. When we create a virtual env and new django project they will be stored as its subfolders.

Main project folder created using django-admin. This main folder has manage.py and Stackproj subfolder initially.

Subfolders created using manage.py startapp

For webpage we need template (html files), views and urls. views.py is modified while template and urls.py in custom made directory like Stackbase is created.

Here we link our newly created folders Stackusers, Stackbase and templates with Stackproj.

Templates folder created in sublime under Stackproj manually

Stackoverflow
